We17: Rapid Fire Research Presentation Competition Finalists

The Rapid Fire is a research presentation competition that takes place at the annual conference, with both undergraduate and graduate divisions. The session name comes from the short length of the talks, only 4 minutes! This format challenges finalists to present their technical work clearly and succinctly to a panel of industry and academia judges from across engineering disciplines. The top 10 finalists were selected this summer to compete at We17 in Austin. After a competitive selection process, they represent top graduate and undergraduate research!

Congratulations to our graduate finalists:

Amy Van Asselt, University of Wisconsin

Sarah Beauchamp, Virginia Polytechnic Institute and State University

Sarah Garrow, University of Illinois at Urbana-Champaign

Divya Kernik, University of California, Davis

Priyanka Sarker, University of Illinois at Urbana-Champaign

Kazi Tasneem, Vanderbilt University

Lisa Volpatti, Massachusetts Institute of Technology

Sarah Watzman, The Ohio State University

Jill Wenderott, University of Michigan

Rana Soltani Zarrin, Texas A&M University
